Any statements regarding market events, future events or other similar statements constitute only subjective views, are based upon expectations or beliefs, should not be relied on, are subject to change due to a variety of factors, including fluctuating market conditions, and involve inherent risks and uncertainties, both general and specific, many of which cannot be predicted or quantified and are beyond a manager's control. Future evidence and actual results could differ materially from those set forth in, contemplated by, or underlying these statements. In light of these risks and uncertainties, there can be no assurance that these statements are now or will prove to be accurate or complete in any way. Unless otherwise indicated, performance results are gross of applicable fees and expenses and presume reinvestment of income. Benchmarks and financial indices are shown for illustrative purposes only, may not be available for direct investment, are unmanaged, assume reinvestment of income, do not reflect the impact of any management or incentive fees and have limitations when used for comparison or other purposes because they may have different volatility or other material characteristics (such as number and types of instruments). Certain information is based on data provided by third-party sources and, although believed to be reliable, has not been independently verified and its accuracy or completeness cannot be guaranteed.

This material has been furnished upon request, solely for your information and may not be reproduced or otherwise disseminated in whole or in part without our prior written consent.

ADDITIONAL INFORMATION

- Views and opinions expressed may change based on market and other conditions.
- Investment decisions should be based on an individual's own goals, time horizon, and tolerance for risk.
- Past performance is no guarantee of future results.
- Investing involves risk.
- Diversification does not ensure a profit or guarantee against loss.
- All indices are unmanaged and performance of the indices include reinvestment of dividends and interest income, unless otherwise noted, are not illustrative of any particular investment and an investment cannot be made in any index.
- Although bonds generally present less short-term risk and volatility than stocks, bonds do contain interest rate risk (as interest rate rise, bond prices usually fall and vice versa) and the risk of default, or the risk that an issuer will be unable to make income or principal payments.
- Additionally, bonds and short-term investments entail greater inflation risk, or the risk that the return of an investment will not keep up with increases in the prices of goods and services, than stocks.
- Foreign investments involve greater risks than U.S. investments, including political and economic risks and the risk of currency fluctuations, all of which may be magnified in emerging markets.
- The municipal market is volatile and can be significantly affected by adverse tax, legislative, or political changes and the financial condition of the issuers of municipal securities.
- Interest rate increases can cause the price of a debt security to decrease.
- Stock values fluctuate in response to the activities of individual companies and general market and economic conditions, domestically and abroad.
